

Luwei (Luis) Lin

431-777-9095 · luweil2@illinois.edu · linluwei1996@gmail.com · [LinkedIn](#) · [luwei-lin.github.io](#)

Full-stack software engineer with 2+ years shipping production features across SaaS platforms. Built ML pipelines (SVC, NER, TF-IDF) in Python and full-stack systems in Java, React/TypeScript, backed by PostgreSQL and MongoDB. Experienced with cloud infrastructure on AWS using Docker and CI/CD. Holds CCIE #65030 with deep TCP/IP and distributed systems fundamentals.

EDUCATION

University of Illinois Urbana-Champaign — Master of Computer Science

Sept 2026 – Dec 2027 (Expected)

Urbana-Champaign, IL, USA

University of Alberta — B.Sc. Computing Science & Statistics

Sept 2021 – Apr 2026

Edmonton, AB, Canada

PROFESSIONAL EXPERIENCE

Software Engineer, Intern — [Arista Networks, Routing Team](#)

Sept 2023 – Dec 2023

Vancouver, BC · Linux, C++, Python3, EOS, YAML

- Reduced BGP/OSPF route convergence time on Arista EOS datacenter switches by redesigning graph traversal algorithms (DFS/BFS) in C++, directly improving network recovery performance in production environments.
- Diagnosed and resolved critical routing protocol bugs in large-scale datacenter network environments; implemented structured error logging to detect and isolate anomalous routing behavior across fleet deployments.
- Designed test plans and automated validation frameworks in Python3 for large-scale routing feature verification across datacenter network topologies.
- Automated router configuration provisioning for cloud datacenter deployments using YAML-based infrastructure-as-code, enabling scalable and repeatable network rollouts.

Full-Stack Software Engineer — [Avanti Software](#)

May 2024 – Present

Remote, Edmonton AB · Java, React, TypeScript, ASP.NET, PostgreSQL, Redis, Docker, AWS, C#

- Architected and deployed a scalable full-stack payroll system (Java, React, TypeScript) for 300+ enterprise clients, supporting critical financial workflows with strong uptime and reliability.
- Engineered a distributed, event-driven batch processing pipeline to manage highly concurrent state mutations, using fault tolerance and idempotency to ensure reliable execution.
- Optimized complex relational schemas and query plans in PostgreSQL, then integrated distributed caching with Redis to resolve high-concurrency bottlenecks.
- Spearheaded cloud infrastructure automation and containerization with AWS and Docker, designing robust CI/CD pipelines for faster, safer production rollouts.

Backend ML Developer, Contract — [ShopHopper](#)

Sep 2022 – Apr 2023

Kelowna, BC · Python3, PostgreSQL, scikit-learn

- Built an ML pipeline using Linear SVC to classify and decode product strings for cross-catalog matching.
- Implemented a recommendation engine that matched user preferences to products and improved purchase conversion.

Data Analyst, Intern — [Mitacs](#)

May 2022 – Aug 2022

Edmonton, AB · Python3, NLP, spaCy, Jupyter

- Trained a NER model in Python/spaCy to extract structured product attributes such as size, color, and pattern from raw text at scale.
- Built a text normalization pipeline with TF-IDF and n-gram phrase matching to sanitize and standardize 30K+ product records.

RELEVANT PROJECTS

Real-Time Video Call & Chat App

2021

- Built a full-stack real-time communication app using WebRTC, ICE/TURN/STUN protocols, and Node.js.

Wildfire Prediction — [Borealis AI](#)

Oct–Nov 2021

- Processed 2M weather records, implemented LSTM and regression models, and built a web crawler that generated a 1M-record training dataset.

TECHNICAL SKILLS

Languages	Python3, TypeScript, C#, JavaScript, C++, C, Java, R
Frameworks	React, Next.js, ASP.NET, Node.js, Flask, WebRTC, Socket.io
AI / ML	scikit-learn, spaCy, LSTM, TF-IDF, NER, SVC, Pandas, NumPy
Databases	PostgreSQL, MongoDB, MySQL, SQLite3, Redis
Infrastructure	AWS, Docker, Linux/Unix, Git, Jenkins, CI/CD, YAML
